YLEISTIETOJA TUTKIMUKSESTA JA TULOSTEN KÄSITTELYSTÄ

Tie- ja vesirakennushallituksen toimesta v. 1966 suoritettun valtakunnallisen liikennevirtatutkimuksen (VLT-66) perusaineisto, tiedot maantieliikenteen matkoista ja kuljetuksista, kerättiin haastatteleamalla autoliikennettä 70:ssä pisteessä pääteiden varsilla, lähinnä ns. liikennealueiden rajoilla, tavallisena arkipäivänä klo 7-21 sekä maaliskuu-, elokuu- että lokakuussa. Haastattelupisteiden sijoitus on esitetty karttaliitteessä.

Oheinen tietokone-listan moniste sisältää 97:n osa-alueen väliset liikennevirrat (10 x KAVL) sekä näiden osa-alueittaiset summat (KAVL). Osa-aluejako on liitteessä. Tuloksia tarkasteltaessa on huomattava, että tutkimustavasta, lähinnä pisteiden sijoituksesta johtuen tietyt liikennevirrat ovat puutteellisia tai puuttuvat kokonaan. Näin tapahtuu liikennealueiden sisäisten osa-alueiden välillä sekä yleensä kahden vierekkäisen osa-alueen välillä. Näiden liikennevirtojen valtakunnallinen merkitys on kuitenkin vähäinen.

Perusaineistolle on suoritettu seuraavat korjaukset:

- haastatteluaikana haastatteleмата jääneiden autojen osalta otantakorjaus
- päiväliikenne (klo 7-21) on muunnettu vuorokausiliikenteeksi
- kolmen haastattelujakson vuorokausiliikenteet on muunnettu vuoden keskimääräiseksi arki vuorokausiliikenteeksi (KAVL).

Korjaukset on suoritettu autolajeittain tai matkaryhmittäin.

Tarkempia tietoja tutkimuksen suorituksesta on saatavissa joko monisteesta: VLT-66, Tavoitteet, suoritustapa ja ennakkotuloksia, TVH syyskuu 1967 tai suoraan tie- ja vesirakennushallituksen tiestötoimistosta.
